EDUCATION

SC (Hons) GAMES DESIGN
Manchester Metropolitan Uni
Sept 2023 - Present

L3 MEDIA (Games Design)
Salford City College
June 2023

SKILLS

Attention to detail
Problem-solving
Leadership
Teamwork
Time management
Organization and Planning

SOFTWARE

Unity
Unreal Engine 5
Aseprite
Autodesk Maya

PROFILE

I am a motivated game design student interested in expanding my skills in the design and development sectors. I have experience in Unity C# and blueprinting in Unreal Engine 5 specializing in player systems and designing levels. Additionally, I use art software such as Aseprite to create pixelated graphics and Maya to create detailed 3D models with an understanding of retopology and UV unwrapping.

EXPERIENCE

PROJECT MANAGEMENT

During a university module I was chosen to manage a team of 9 students involving artists and programmers to develop a game. To manage the team and their tasks, I used Jira to create weekly sprints within the scrum framework. This involved holding sprint retrospective meetings to better organize our time and delivering weekly stand-up presentations reporting on our progress which improved my communication skills.

GAME JAMS

Another module provided great experience in rapid prototyping through weekly game jams. During this module I demonstrated the ability to adapt my workflow to the requirements of the theme and prioritized my time to meet the weekly deadlines. These game jams pushed me to work at a fast pace while giving me experience in producing games in a variety of genres. During this time, I was awarded *Best Use of Theme* for the puzzle box game jam.

ENVIRONMENT/LEVEL DESIGN

For this unit, a level inspired by *Batman: Arkham Asylum* was made in Unreal Engine 5. This provided experience in producing level blackouts, design iteration and building player and NPC functionality with blueprints. Combining vertical design, lighting, and level-layout with gameplay that is honorable to *Batman: Arkham Asylum* awarded me a score of 96% for this assignment.
